

Duotail

Reinventing the backbone of email.

Bulletproof against anyone you didn't invite, built to scale to everyone.

Pre-seed · September 2026 · duotail.com

Your inbox is abused, and you can't walk away from it

Every inbox is open by default: anyone can send, nothing asks you first, and the cleanup falls on you.

Spam is structural

Once an address leaks, it's on every list forever. Filters guess.

Unsubscribe is theater

Links track you, half don't work, and the rest are built to keep you.

Identity's weak link

Every account recovers through email. A cheap subscription bomb buries the one alert that matters.

Result: you cope, because walking away just creates a second broken inbox.

Today's fixes solve the wrong problem

Aliases protect addresses you don't care about. Encryption protects content, not access.

Alias services (SimpleLogin, Relay, Hide My Email)

- ✓ Gives you an exit after a breach
- ✗ Stops spam only by killing the alias
- ✗ Aliases are for throwaway signups, not your bank
- ✗ Protects where protection matters least

A spare identity for throwaway signups. Your real address stays exposed.

Encrypted mail (Proton and similar)

- ✓ Strong privacy for message content
- ✗ End-to-end only if both sides use Proton or PGP
- ✗ Otherwise a normal inbox with a spam filter
- ✗ Anyone who knows your address can still reach you

Locks the room. Doesn't guard the door.

And AI filtering? An arms race the receiver loses: a million AI emails cost nothing to send, everything to filter.

Our insight: bake purpose into the address

Two flaws keep every inbox open. Fix them and the rules write themselves.

Why filters can't fix it

Email favors the sender

Tuned for 99%+ delivery. A front door you must leave unlocked.

An address says nothing

An arbitrary string, so mail is judged on name and content. Both are faked.

The fix: one identity, a purpose tag per relationship

`happy.rhino_<purpose>@duotail.com` default-closed

Contacts `any address`

Trusted senders. Always in, at every address.

Subscriptions `_news`

Mute or unmute any sender. Come back when you want the deal.

Cold reaches `_hello`

One email per stranger. Lock the address when it spoils.

No AI, no guessing. The address is the rule.

If "Your Bank" writes to your alumni address, you know it leaked.

Built and working today

Four layers of infrastructure, all live at my.duotail.com.

Email infrastructure

The boring part, done right

Send, receive, reply, bounce handling. Own mail servers.

Gateway infrastructure

What makes Duotail different

Identities, channels, routes, contacts, permissions, and a log of every decision.

Security infrastructure

Trust by design

Zero-knowledge storage, bot-proof login, scan and summary of every email.

Cloud infrastructure

Built to ship fast

Infrastructure as code, AI-driven test and deploy, zero-downtime releases.

Business model: inbound is free, outbound is paid

A clean inbox is free. An identity is paid.

Free

\$0

Receive & reply

- Unlimited channels and routes
- Email Summary and one-click controls
- Zero-knowledge storage

Sender

\$10 /mo

Send from your identity

- Everything in Free
- Send up to 150 emails / month
- Verified identity channel

Add-ons

+\$10 /mo

Coming next

- MCP / AI-agent access
- High-volume tier above 150 / month
- Business identity verification

Why people upgrade: the address is the badge. a_harry.potter@ is an anonymous Harry Potter; harry.potter@ is a verified one. Visible in every inbox, no login required. Free users are never degraded; paid users are believed.

Market: everyone with an inbox

Half the planet is the market, and serving them costs almost nothing.

1 in 2

people on Earth use email

Radicati Group, Email Statistics Report 2024–2028

~45%

of global email traffic is spam, scam, phishing, or malware

Kaspersky, Spam and Phishing Report 2025

100M+

Proton accounts. Privacy email sells when it's easy.

Proton, April 2023

Infrastructure cost today

\$0.03

per user per month

Infrastructure only, at \$10 / month per paid user.

0.3%

paid conversion covers it

10,000

users on today's stack

18-month roadmap

From working MVP to a product people trust with their primary address.

Now

Working MVP

Channels, routes, contacts, listener, zero-knowledge encryption. Live; founder is user #1.

Months 1-6

Incorporate & monetize

Incorporate, launch paid plans on Stripe, add a growth co-founder, first 1,000 users from privacy forums.

Months 6-12

Mobile app

iOS and Android; MCP access for AI agents.

Months 12-18

Reputation & scale

Provider reputation, paid conversion, business verification.

Team

Solo technical founder, looking for a growth co-founder.

Tao Dong

Founder & Engineer

- 20 years full-stack, 10+ building email products
- Built all of Duotail solo: gateway, encryption, dashboard, cloud
- Started Duotail when marketers began emailing his 3-year-old daughter

Looking for: a growth co-founder

The product is built. Distribution needs an owner, not a hire.

- Owns acquisition, community, and partnerships
- Has taken a consumer product from 0 to 100k users
- Cares about privacy enough to sell it
- Meaningful equity

Pre-seed, to take Duotail from MVP to market.

\$1.5M

Pre-seed · 18 months of runway

Milestones this round buys

- Company formed, paid plans live via Stripe
- Mobile app shipped and MCP access live
- First paying cohort and the data to raise a seed

Use of funds

■ Growth & marketing ■ Engineering
■ Infrastructure & operations

The vision

Eradicate spam and junk for every user. Route 70% of private email through a segmented gateway.
